Language

- English

Skills

- Smart Contract

  Solidity, Rust, Go, Solana, Cross Chain, Bridge
- Backend

  Express.js, Graphql, Rust, PostgreSQL, Prisma

Experience

✦ **2024.3 - Present**

Freelancing
Role: Senior Fullstack Blockchain Engineer

-Projects

https://henlotoken.com/

Developed the Henlo Token smart contract and a presale contract in Solidity, facilitating both private and public sales. The presale includes liquidity provision on Uniswap. Additionally, I created a platform for the public sale of the token. This project aims to enhance accessibility and engagement in the token's launch.

https://t.me/HenloTokenbot/henlo

This is a mini app for coin($HENLO) mining on Telegram. In this project, I was responsible for both frontend and backend development. I built the app using React and Express frameworks, along with the Telegram API. I optimized overall performance by reducing the First Contentful Paint (FCP) and Largest Contentful Paint (LCP) metrics. Since LCP is crucial for performance, I focused on optimizing image loading, as it often takes the most time. Therefore, optimizing image files was essential.

✦ Previous Experience

Company : Wanchain
City : Austin
Role: Smart Contract Developer
201.10 - 2022.11

Wanchain is creating new distributed financial infrastructure. Cross-chain smart contracts built on Wanchain will power the new digital economy.

Company: Stability
Remote
Role: Fullstack Blockchain Engineer
2022.12 - 2024.3

Stability stands as a decentralised infrastructure layer for strategic DeFi Assets Management of crypto earnings through rewards. Designed with a focus on safety and efficiency, Stability ensures users achieve the highest Annual Percentage Yields (APYs) effortlessly.

Education

University of Texas at San Antonio

Bachelor of Science in Computer Science
2017-2021
